IN THE SPECIFICATION

Please amend the bridging pages 7 and 8 of the specification (paragraph [0038]) as follows:

The computer system is provided with N pieces of value predictors (12) based on different value prediction methods and selector (13), value prediction masking gate (14), execution unit (14$\underline{5}$), and register (16). Execution of an instruction, using the values contained in the fields except the value prediction field (5) and value prediction method field (6) is conducted by the execution unit (15).
